

Lily Softball

■ Softball · Right-handed hitter · 2026 · Session: May 28, 2026

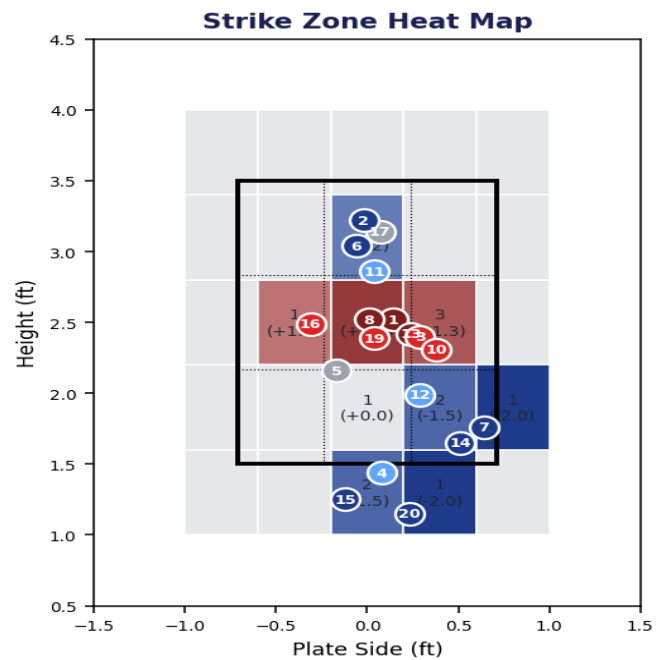

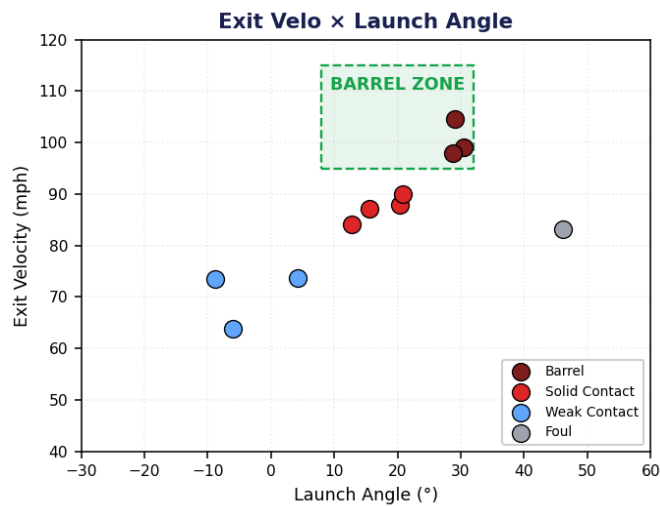

Swings	Avg Exit Velo	Peak Exit Velo	Avg Bat Speed	Barrel %	Whiff %
18	84.9 mph	104.6 mph	69.6 mph	16.7%	33.3%

Spray Chart & Swing Outcomes

Spray chart: every ball-in-play, colored by contact quality. Barrels (dark red) drive extra-base hits; weak contact (light blue) usually = routine outs.

Contact Quality & Zone Tendencies

Left: EV × Launch Angle. The shaded green box is the barrel zone (EV 95+ mph, LA 8°-32°) — where extra-base hits live. Right: the 5×5 strike-zone heat map colored by contact quality. Red zones = punishes pitches here; blue zones = struggles.

Performance by Pitch Type Faced

Pitch Type	Seen	Swings	Whiffs	Barrels	Avg EV	Avg LA
Change-Up	2	1	0	0	63.8 mph	-6.1°
Drop Ball	4	3	2	0	73.6 mph	4.2°
Rise Ball	4	4	2	0	78.3 mph	18.7°
Screwball	2	2	2	0	—	—
Softball Fastball	8	8	0	3	90.7 mph	28.0°

Swing Mechanics Critique

What's Working	Areas to Improve
✓ Strong bat speed. Avg bat speed was 69.6 mph — in the upper range for Softball (65-72 mph). <i>Drives exit velocity. Every +1 mph of bat speed ≈ +1.2 mph of exit velo.</i> ✓ Strong hip-shoulder separation. Peak hip-shoulder separation averaged 38.7° — in the upper range for Softball (38-48°). <i>Rubber-band torque drives bat speed and exit velocity.</i>	Clean swing — no corrections flagged.

Lily Softball — Action Plan

■ Today — Cooldown (within 30 min of finishing)

Standard Swing Session Cooldown [Recovery]

Drill: Wrist/forearm mobility + shoulder blade slides + light foam roll

Protocol: Forearm flexor stretches 3×30s each side. Scap slides 2×10. Foam roll T-spine 2 min.

Hitters accumulate forearm and lat fatigue from BP. Flushing the tissue speeds recovery for tomorrow.

■ **Forearm Stretch — Arm Stretch For Baseball** — YouTube

Triggered by: Standard cooldown after any swing session.

■ This Week — Before Next BP

Maintain and repeat what's working.
