

# Lily Softball

■ Softball · Right-handed hitter · 2026 · Session: May 28, 2026

| Swings | Avg Exit Velo | Peak Exit Velo | Avg Bat Speed | Barrel % | Whiff % |
|--------|---------------|----------------|---------------|----------|---------|
| 18     | 84.9 mph      | 104.6 mph      | 69.6 mph      | 16.7%    | 33.3%   |

## Spray Chart & Swing Outcomes

Spray chart: every ball-in-play, colored by contact quality. Barrels (dark red) drive extra-base hits; weak contact (light blue) usually = routine outs.

## Contact Quality & Zone Tendencies

Left: EV × Launch Angle. The shaded green box is the barrel zone (EV 95+ mph, LA 8°-32°) — where extra-base hits live. Right: the 5×5 strike-zone heat map colored by contact quality. Red zones = punishes pitches here; blue zones = struggles.

## Performance by Pitch Type Faced

| Pitch Type        | Seen | Swings | Whiffs | Barrels | Avg EV   | Avg LA |
|-------------------|------|--------|--------|---------|----------|--------|
| Change-Up         | 2    | 1      | 0      | 0       | 63.8 mph | -6.1°  |
| Drop Ball         | 4    | 3      | 2      | 0       | 73.6 mph | 4.2°   |
| Rise Ball         | 4    | 4      | 2      | 0       | 78.3 mph | 18.7°  |
| Screwball         | 2    | 2      | 2      | 0       | —        | —      |
| Softball Fastball | 8    | 8      | 0      | 3       | 90.7 mph | 28.0°  |

## Swing Mechanics Critique

| What's Working                                                                                                                                                                                                                                                                                                                                                                                    | Areas to Improve                             |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|
| <p>✓ <b>Strong bat speed.</b> Avg bat speed was 69.6 mph — in the upper range for Softball (65-72 mph). <i>Drives exit velocity. Every +1 mph of bat speed ≈ +1.2 mph of exit velo.</i></p> <p>✓ <b>Strong hip-shoulder separation.</b> Peak hip-shoulder separation averaged 38.7° — in the upper range for Softball (38-48°). <i>Rubber-band torque drives bat speed and exit velocity.</i></p> | <p>Clean swing — no corrections flagged.</p> |

# Lily Softball — Action Plan

## ■ Today — Cooldown (within 30 min of finishing)

**Standard Swing Session Cooldown** [Recovery]

**Drill:** Wrist/forearm mobility + shoulder blade slides + light foam roll

**Protocol:** Forearm flexor stretches 3×30s each side. Scap slides 2×10. Foam roll T-spine 2 min.

*Hitters accumulate forearm and lat fatigue from BP. Flushing the tissue speeds recovery for tomorrow.*

■ **Forearm Stretch — Arm Stretch For Baseball** — YouTube

Triggered by: Standard cooldown after any swing session.

## ■ This Week — Before Next BP

Maintain and repeat what's working.
